Anyone have luck with uploading their info with anything
but Excel? Anyother means would be help.

Thanks Ken N6KBM

Hi Ken,

I use DBF files (dBase compatible) with an application I wrote compiled in CA-Clipper. The basic table structures do not resemble the NADSD format, but all information is present so that the program can "generate" it in a form ready for uploading.

All tables are in at least 3rd normal form and are quite easy to maintain either with a program which I wrote or with any type of tools which can read DBF files. I think a spreadsheet program like EXCEL would work great for small files, etc, but larger ones would need more of a database system behind it.

I realize this is a bit of a home-brew approach, but hey, I'm not using EXCEL.

If thats the avenue of approach you're looking into, let me know and I'll give you more information.

Hi guys,

Just wanted to let everyone know that the Kansas City area is alive and well, however I have not had the time to get the data uploaded in to the database. I am having to hand convert all this over from our database and school and work have priority in my life right now.

Carl, I can use some help, I cannot find all the secret passwords to gain access. Any help would be appreciated.

Thanks,

Tim Mitchell KA5RYF
